Configuration of form functionality

Choose these links to configure the functionality of your form

Form upload

Upload your form here:

or

Enter the URL to your form:

Validation configuration

Click [here](#) if you wish to ensure certain fields are present in the form

Response page configuration

Click [here](#) to configure what response your user sees when the form is submitted

Email configuration

Click [here](#) to configure how the form should be emailed to you

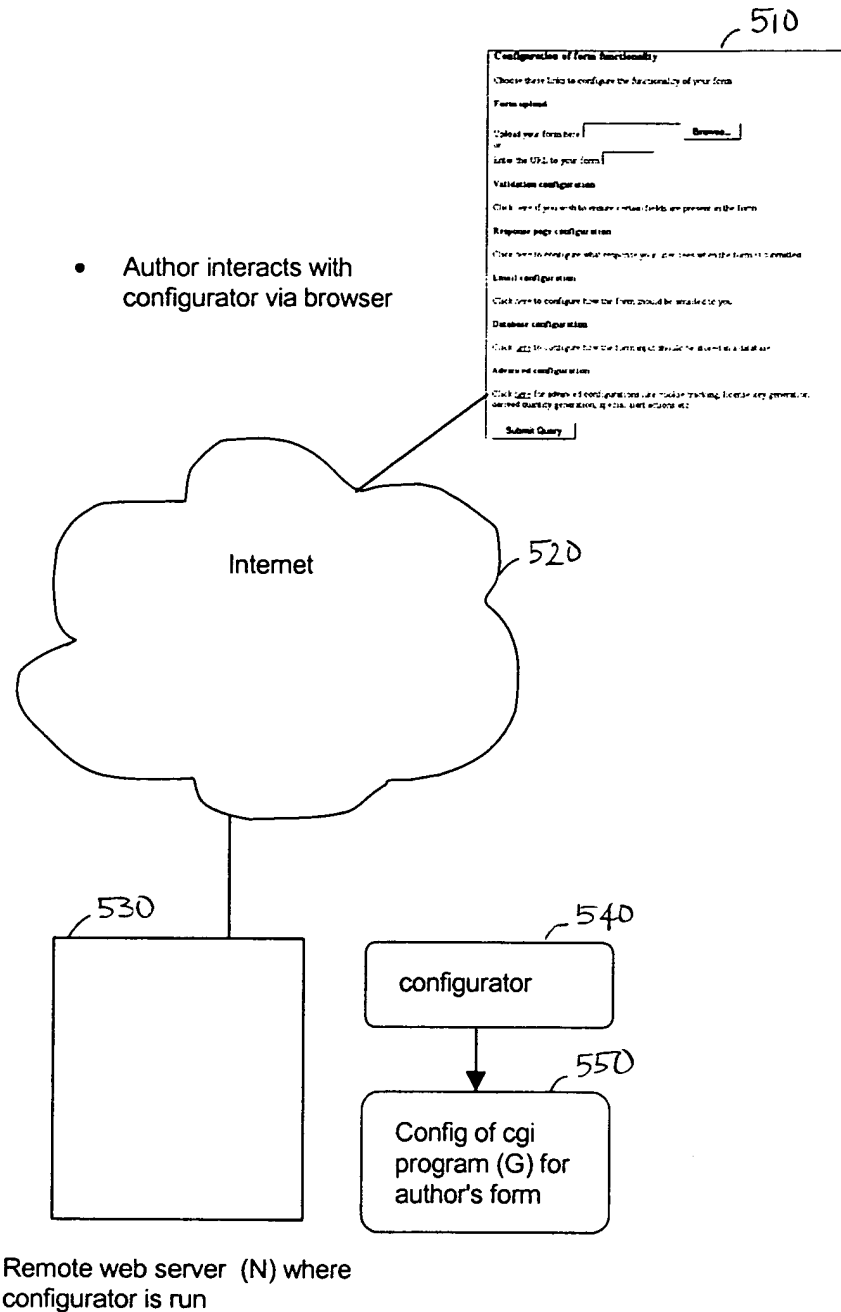

Database configuration

Click [here](#) to configure how the form input should be stored in a database

Advanced configuration

Click [here](#) for advanced configurations like cookie tracking, license key generation, derived quantity generation, special alert actions etc.

Figure 5: block diagram of one embodiment of a system for remote configuration of forms and generation of cgi

Configuration of form functionality

Choose three links to configure the functionality of your form

Form options

Upload your form here

or

Enter the URL to your form

Validation configuration

Click here if you wish to require certain fields are present on the form

Response page configuration

Click here to configure what response page your form will display upon submitting

Email configuration

Click here to configure how the form should be emailed to you

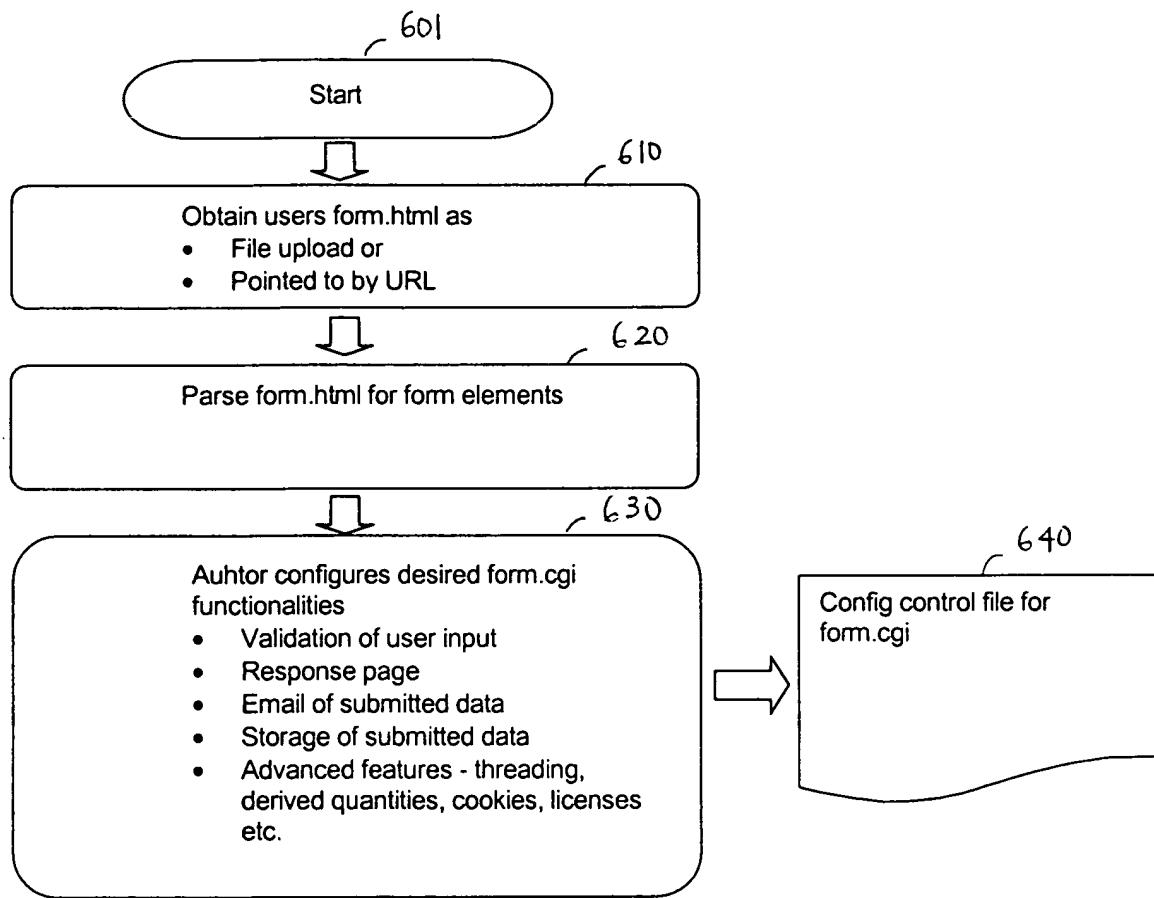

Database configuration

Click here to configure how the form will store the data in a database

Advanced configuration

Click here for advanced configurations like module tracking, license key generation, desired quantity given access, etc. user actions, etc.
